

About Guardant360 Liquid

A comprehensive liquid profiling test that evaluates 744 genes and includes TMB, MSI status, and ever-expanding epigenomic features.

Test specifications

Sample input	Sample specifications	Turnaround time
Two 10 mL tubes of whole blood	Ship same or next day at room temperature - do not freeze or refrigerate	7 days from sample receipt to results*

Performance specifications

	Limit of Detection at 95% Sensitivity [†]	Specificity	Threshold for Positivity [‡]
Alterations	SNVs	≥99.9%	≥0.001%
	Indels	≥99.9%	≥0.01%
	CNAs	≥99.9%	≥2.13 copies
	CNLs	≥99.9%	—
	Fusions/Rearrangements	≥99.9%	≥2 unique molecules
	MSI-High	≥99.9%	>19 unstable MS sites
	Tumor Fraction	—	—
	TMB	—	≥0.3% [§]
	Promoter Methylation	≥99.9%	≥5 molecules

*Median turnaround time from sample receipt to results.

[†]Limit of detection (LoD) defined as the allele fraction/copy number at which the test has a 95% probability of detection for oncogenic variants and genes with relevance in guidelines, drug labels, and clinical trials.

[‡]Indicates mutant allele fraction for detected SNVs and Indels.

[§]Tumor mutation burden (TMB) evaluable at or above a sample allele fraction of 0.3%.

CHIP: Clonal Hematopoiesis of Indeterminate Potential; CNA: Copy Number Amplification; CNL: Copy Number Loss; MS: Microsatellite; MSI: Microsatellite Instability; SNV: Single Nucleotide Variant.

Scan for algorithmic biomarker specifications

Important Note: Guardant360 Liquid was developed as a Laboratory Developed Test (LDT), and its performance characteristics determined, by the Guardant Health Clinical Laboratory in Redwood City, CA, USA, which is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) as qualified to perform high-complexity testing. This test has not been cleared or approved by the US FDA.

Client Services: 1.855.698.8887 clientservices@guardanthhealth.com guardantcomplete.com

MSI status - Qualitative result

TMB - Mutations per megabase

CHIP - Potential variants noted

Tumor fraction - Percent

Virus - EBV, HPV

[†]Includes TERT promoter region. [‡]Includes CNAs. ^{‡‡}Includes Fusions/Rearrangements. ^{††}Includes Copy Number Losses. ^{†††}Includes Promoter Methylation. ^{††††}Promoter Methylation only. ^{§§}HLA alleles. ^{‡‡††}Pharmacogenomic results. ^{‡‡†††}Virus. ^{†††††}High-risk.

CHIP filter is based on a proprietary algorithm that identifies variants that are potentially derived from clonal hematopoiesis.
