

It's finally here...

The easy way to screen for colon cancer

Answer three quick questions to see if you are eligible for Shield,TM a blood-based colon cancer screening test:

	Yes	No
1 Are you 45–84 years old?	<input type="checkbox"/>	<input type="checkbox"/>

2 Are you average risk for colon cancer?	<input type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------

Answer “Yes” if you have:

- No prior diagnosis of colorectal cancer, adenomatous polyps, or inflammatory bowel disease.
- No personal diagnosis or family history of colorectal cancer or known genetic disorders such as Lynch syndrome or familial adenomatous polyposis.

3 Are you due for colon cancer screening?	<input type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------

Answer “No” if you have completed either of the following screening tests:

Colonoscopy within the last 10 years

— or —

Stool test in the last 1–3 years

If all three answers are “Yes,” you **may be eligible for Shield**, a blood-based colon cancer screening test.

Simple blood draw

No prep

Simply Done

shieldTM

Important Safety Information: Shield Laboratory Developed Test (LDT) is intended for patients 45 and older who are at average risk for colorectal cancer (CRC) and remain unscreened. Shield is intended to be complementary to, and not a replacement for, current recommended CRC screening methods. Patients with an abnormal Shield result should be referred for colonoscopic evaluation. A normal Shield result does not rule out colorectal cancer and patients should continue participating in guideline-recommended screening programs. The Shield LDT test was developed and its performance characteristics were determined by the Guardant Health Clinical Laboratory in Redwood City, CA USA, which is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) as qualified to perform high complexity clinical testing. This test may be used for clinical purposes and should not be regarded as investigational or for research only. This test is not cleared or approved by the FDA.

ASK WHAT'S NEW ABOUT COLON CANCER SCREENING.

Shield is a blood test that requires no preparation and no handling of your stool.

It makes screening for colon cancer simple and it can be done as part of your routine bloodwork.

Why Screen For Colon Cancer?

Colon cancer is a leading cause of death in the United States but it doesn't have to be. Colon cancer screening saves lives.

Generally, colon cancer is slow growing and **treatable if caught early.**

“Colorectal cancer screening saves lives, and yet, millions of people are still not getting it done. Offering patients a convenient and minimally invasive option for getting screened is a great step forward.**”**

— Michael Sapienza
